DEVELOP AN E-COMMERCE WEBSITE TO SELL CLOTHES FOR COLO SHOP

Performer: Tran Thi Hong Tham. Instructor: Dr. Nguyen Van Tinh

INTRODUCTION

Shopping for clothes online via websites is becoming quite popular and widely accepted. This is an online shopping method that uses the internet to facilitate shopping and viewing products when searching for items. Online shopping websites bring significant benefits to both customers and shop owners. Customers can browse or purchase clothing and products anytime, anywhere, without needing to visit the store in person, saving time and travel costs. Customers will find it easier to select the products they need. As for shop owners, thanks to the sales website, they can easily manage their store's operations from anywhere. Shop owners also don't need to do much calculation as the website system will automatically handle it. This helps shop owners save time and allows them to promote their products to a wider audience, boosting their business.

To maximize the benefits of online shopping, I have built a fashion retail website for TK Fashion. The website will enable everyone to buy clothes online with a wide variety of styles and designs, while also helping the owner manage their store most conveniently.

TARGET

Website features:

Customers: to search, view, and purchase clothing products, make online payments, view order details and status, read fashion articles, and update account information.

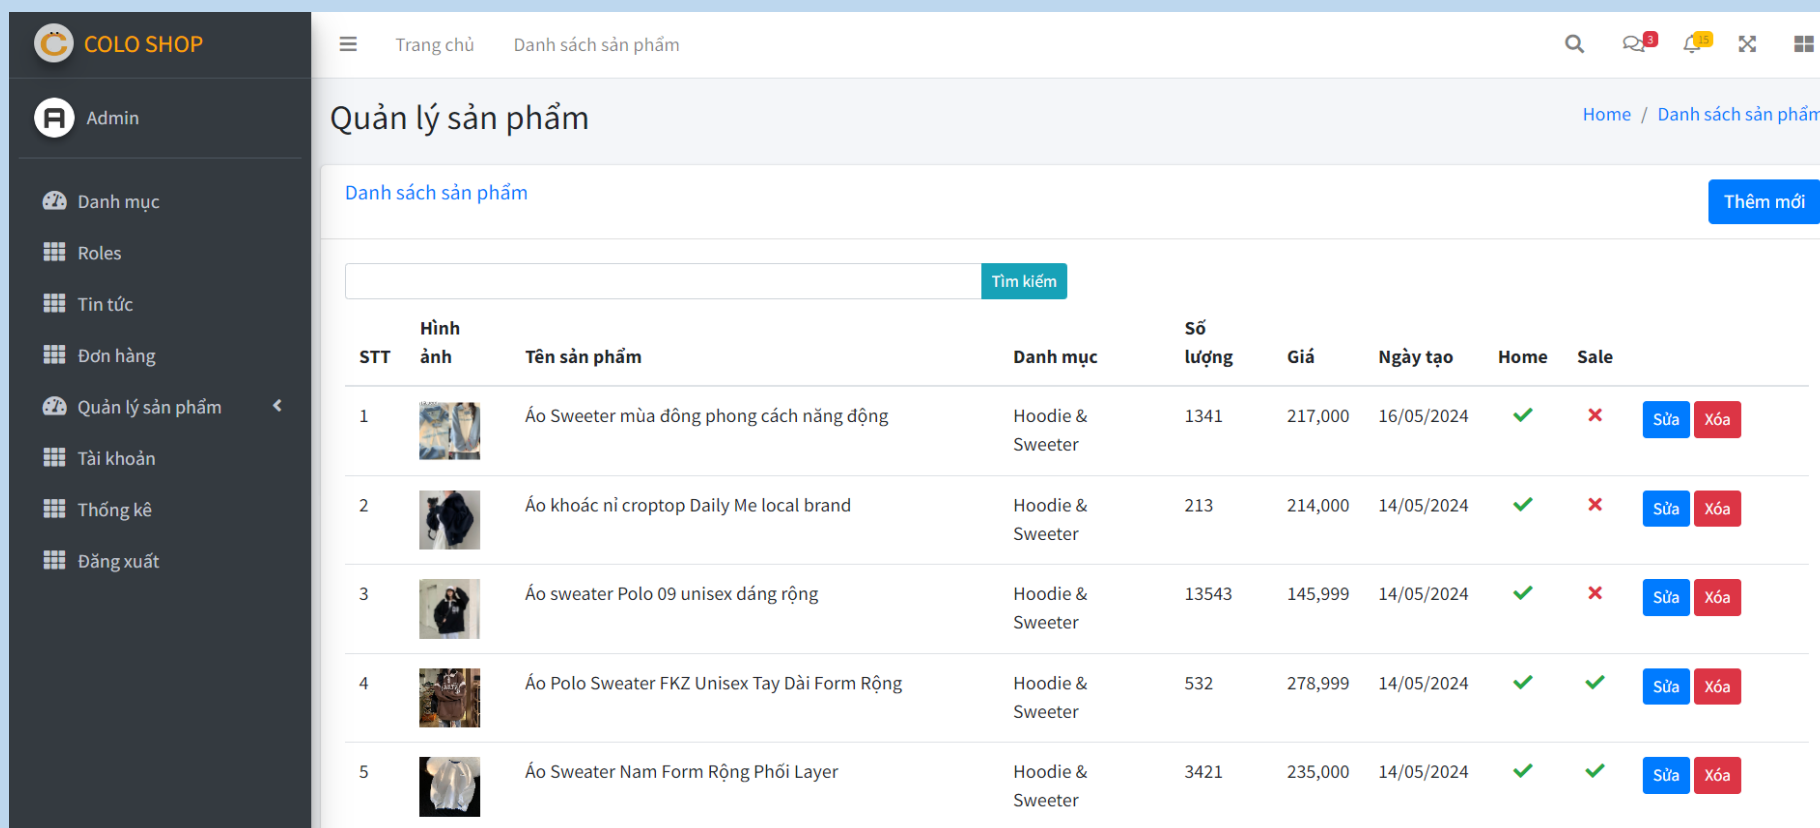

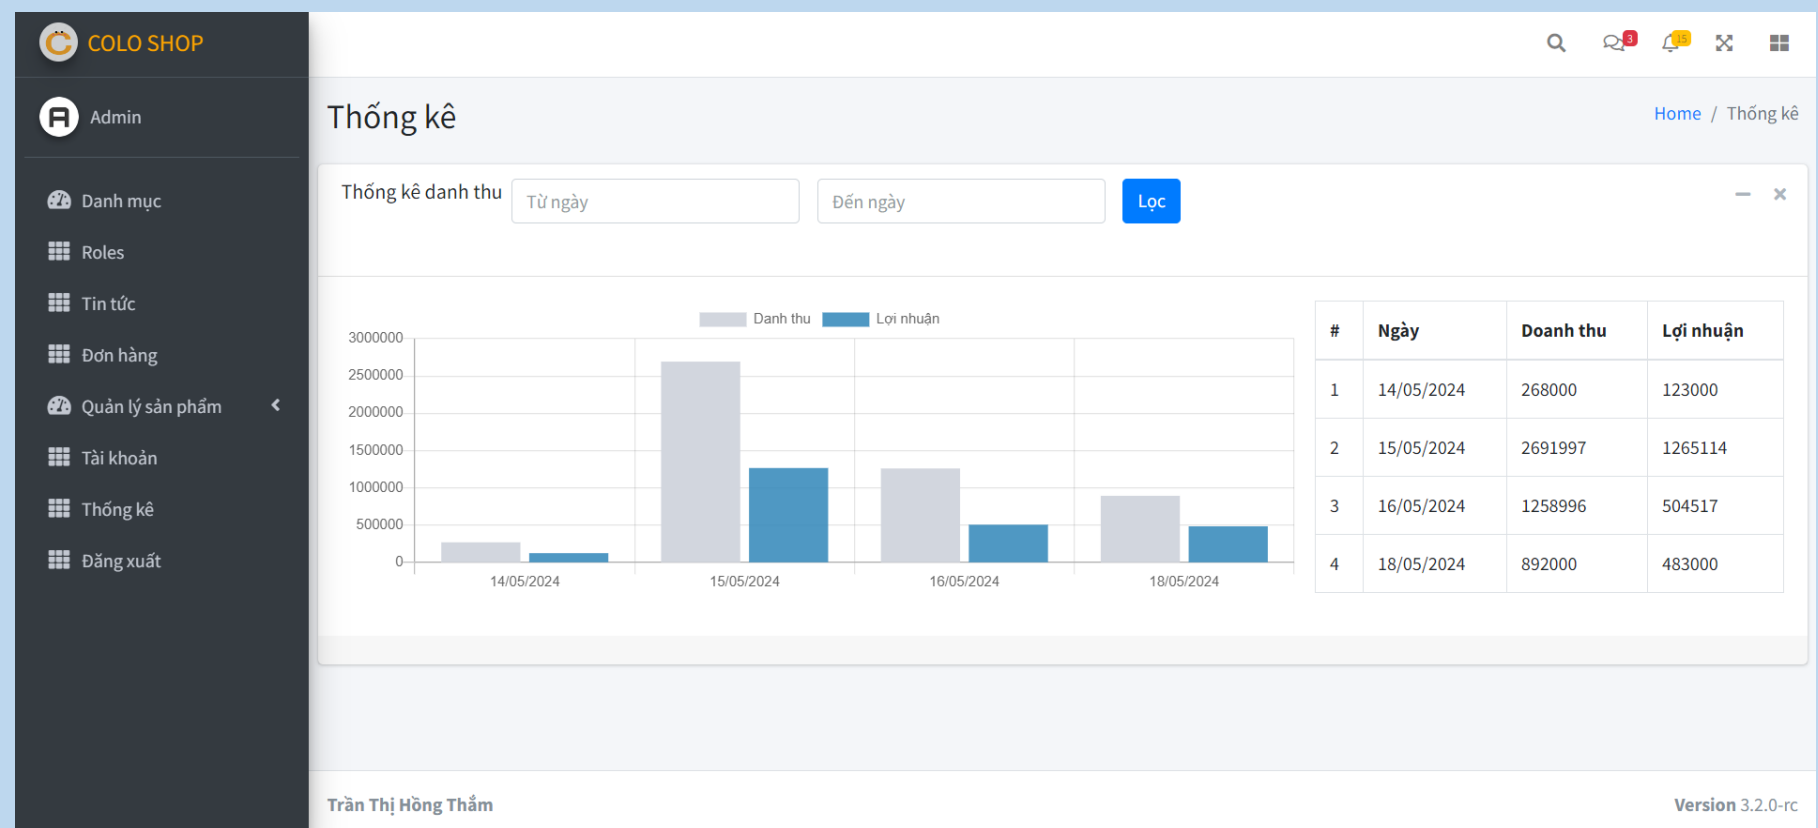

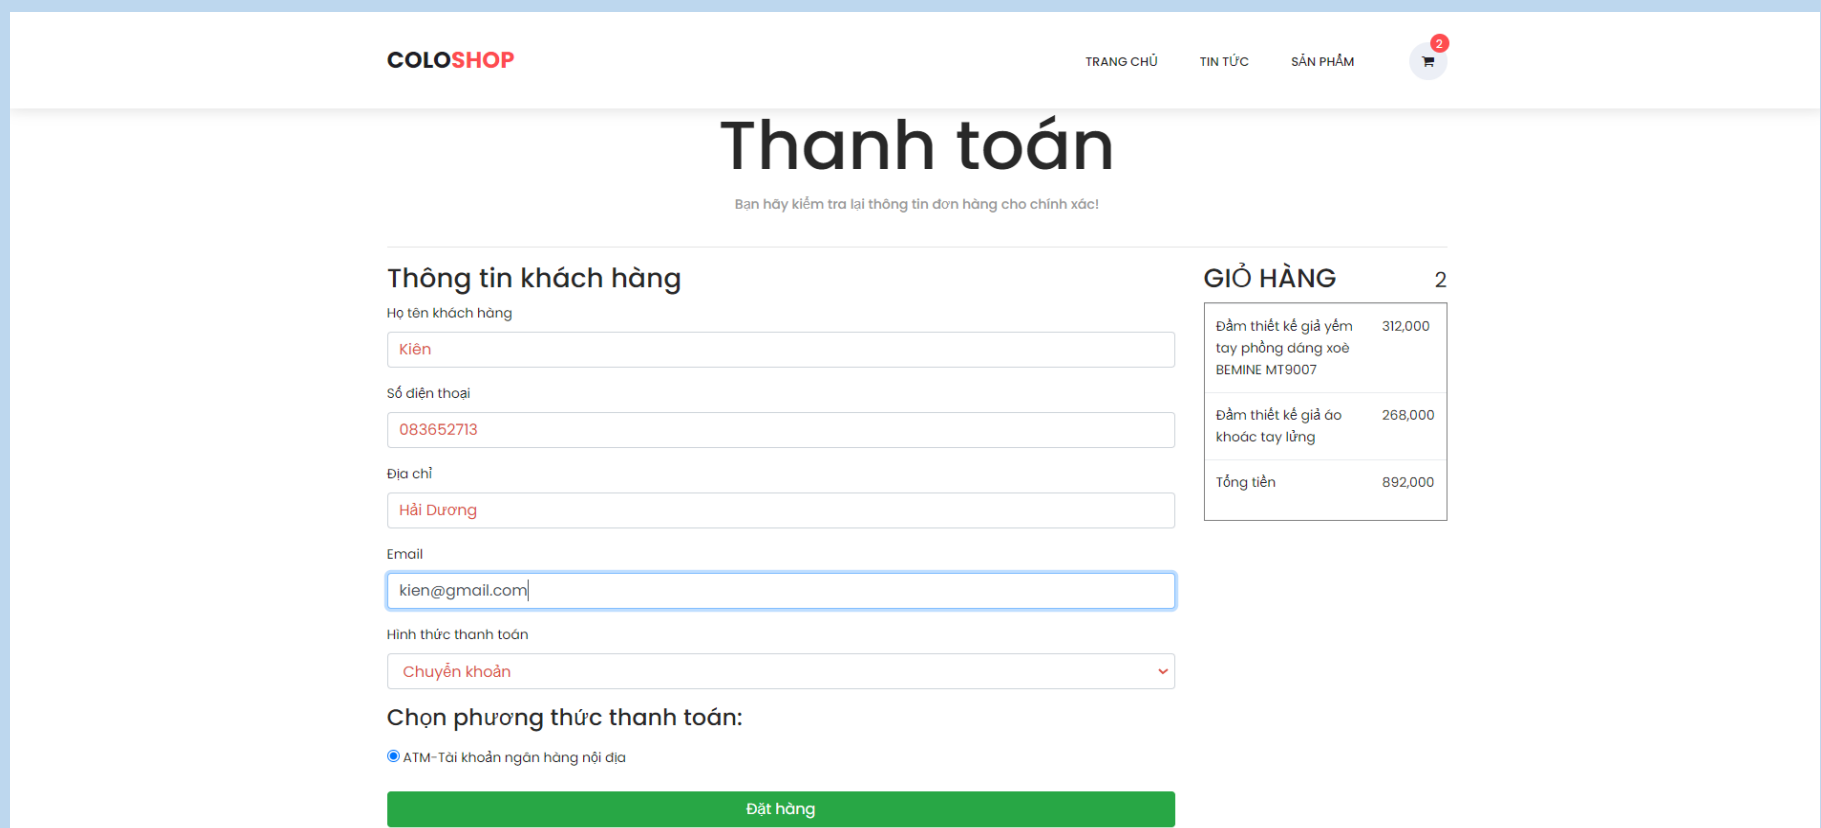

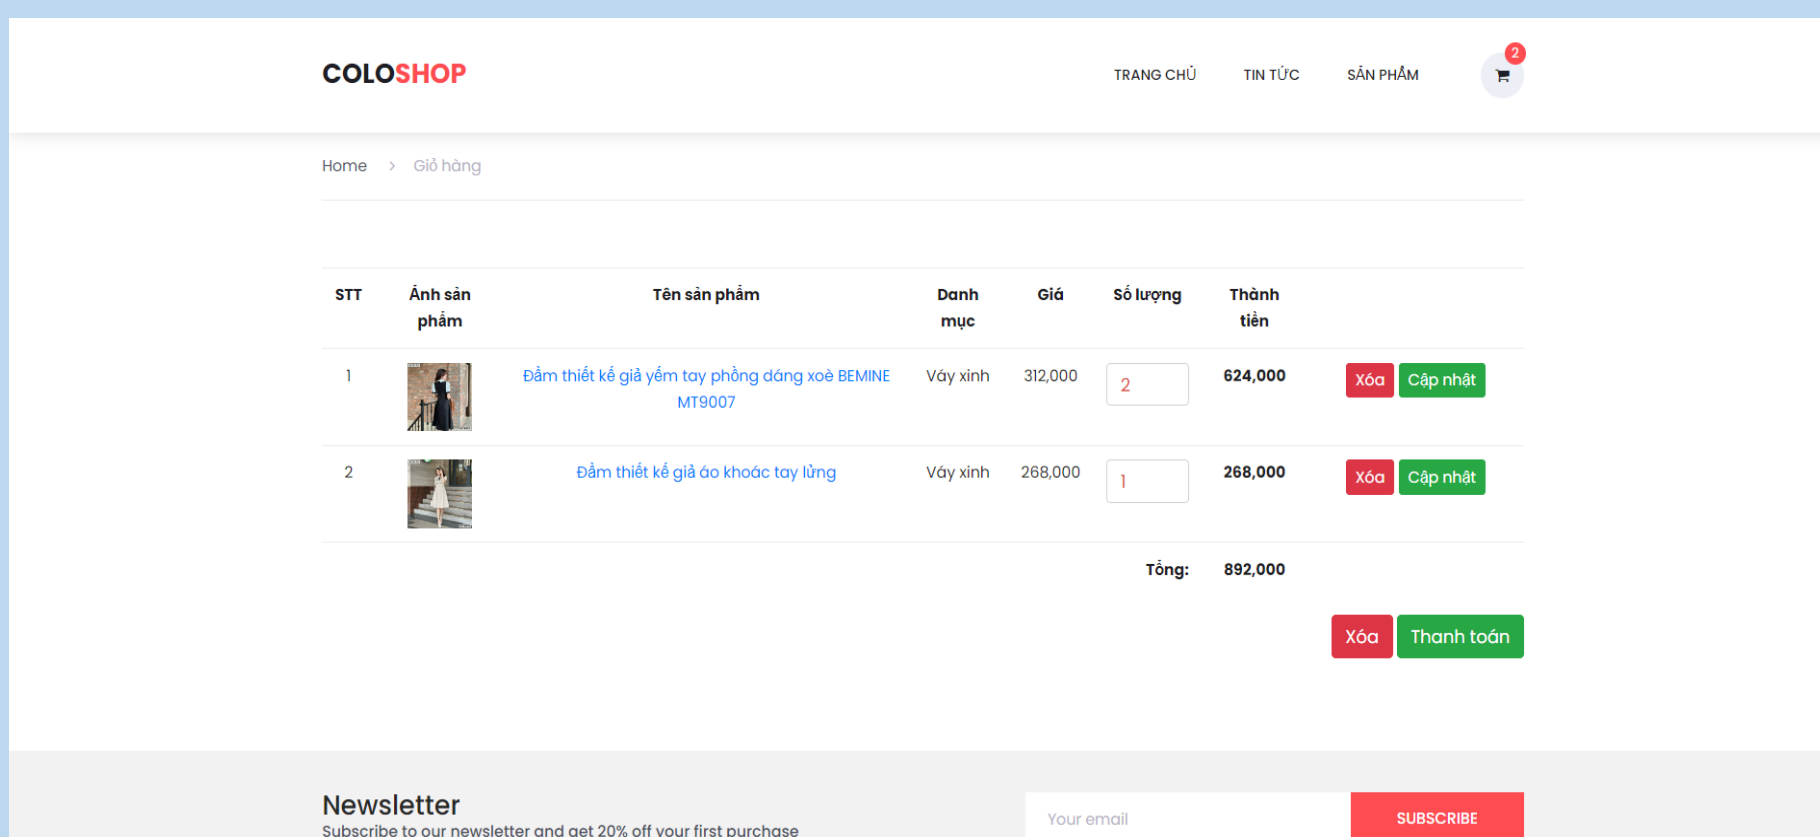

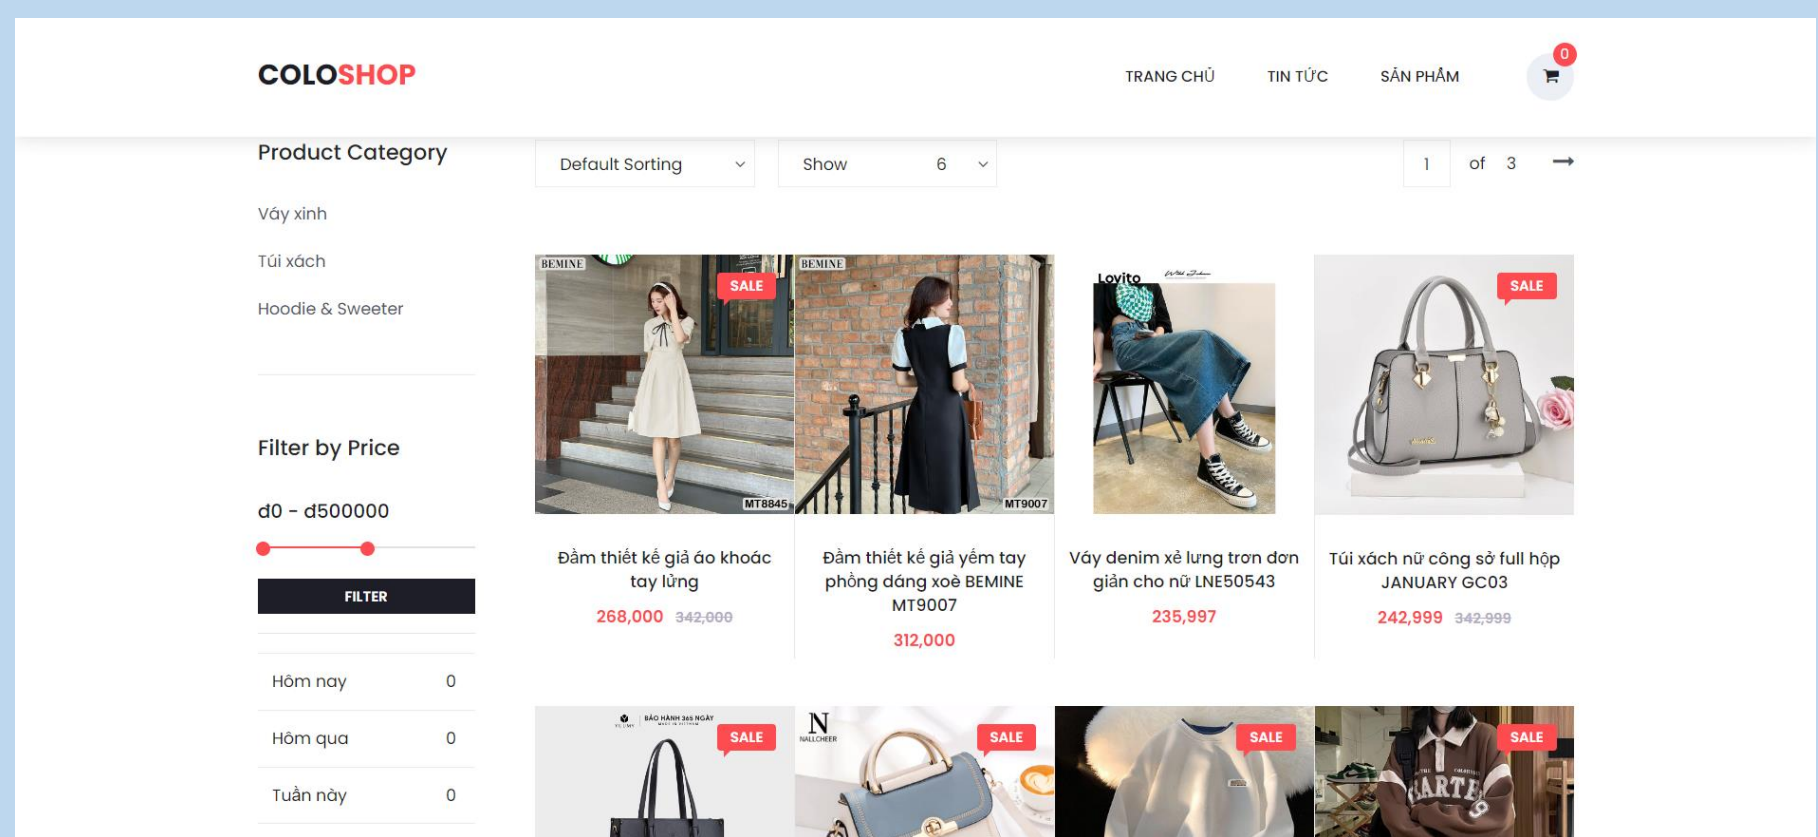

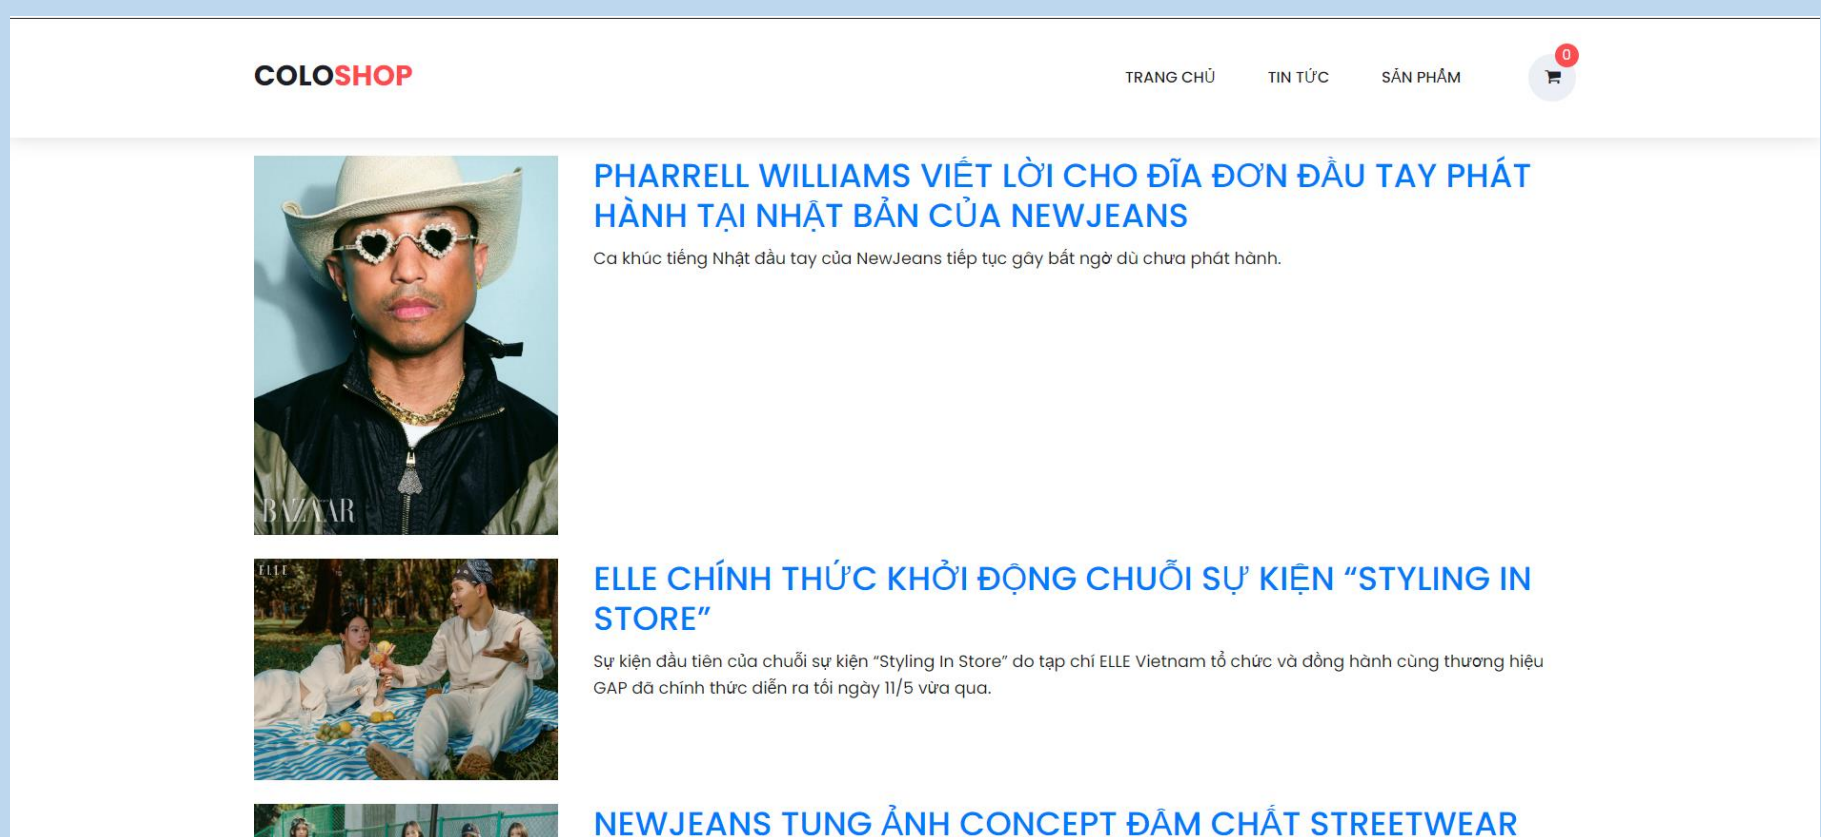

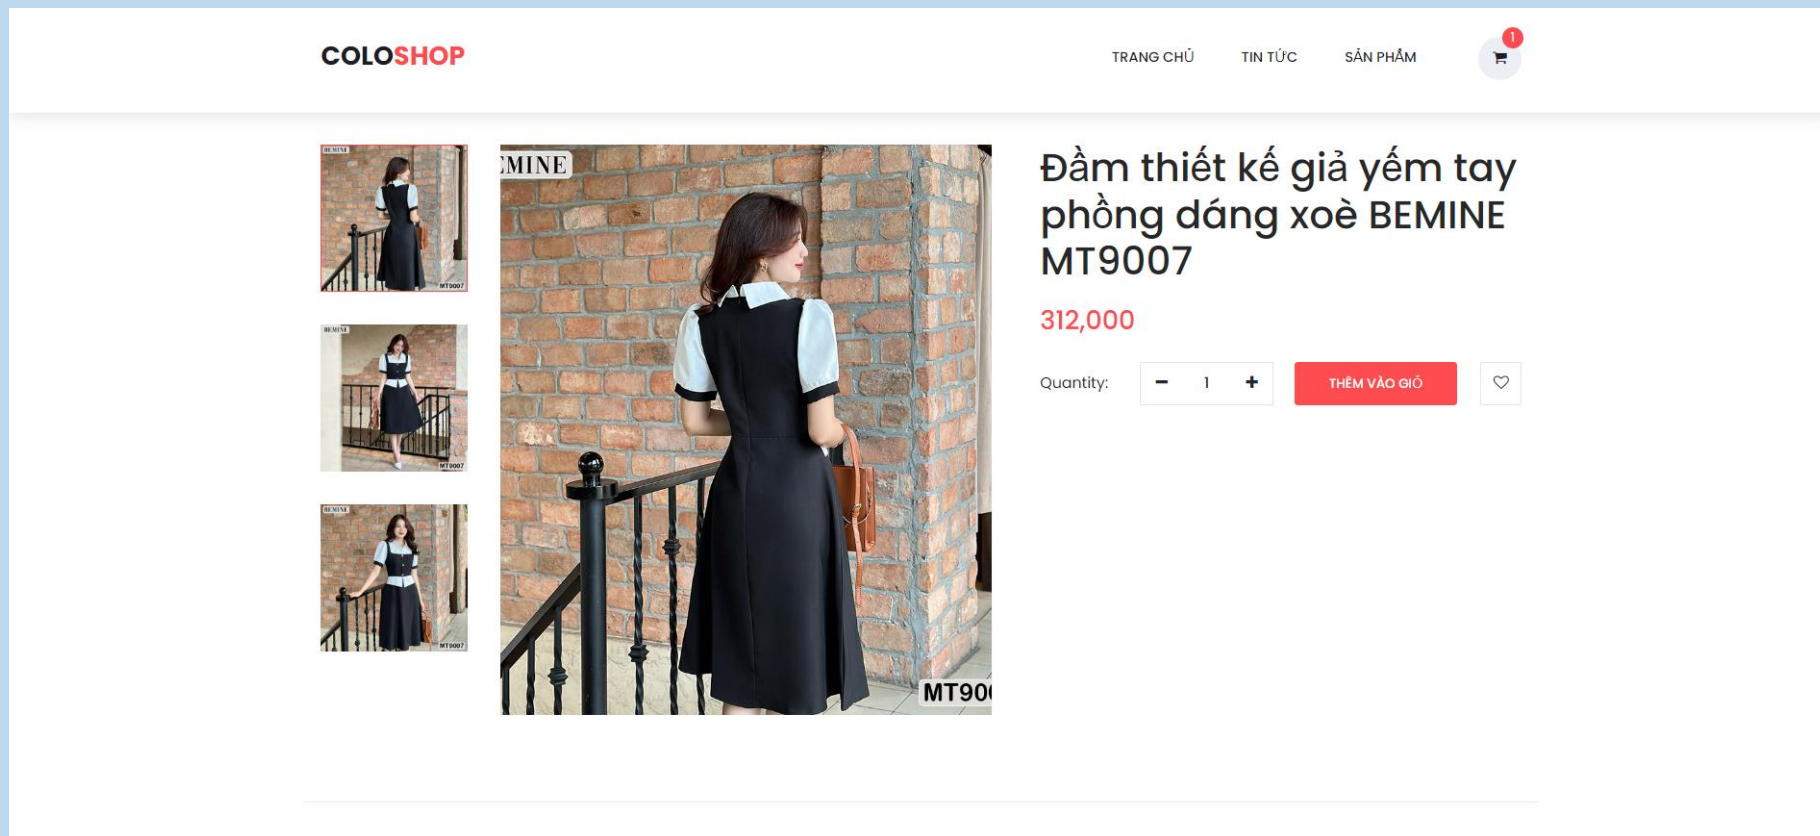

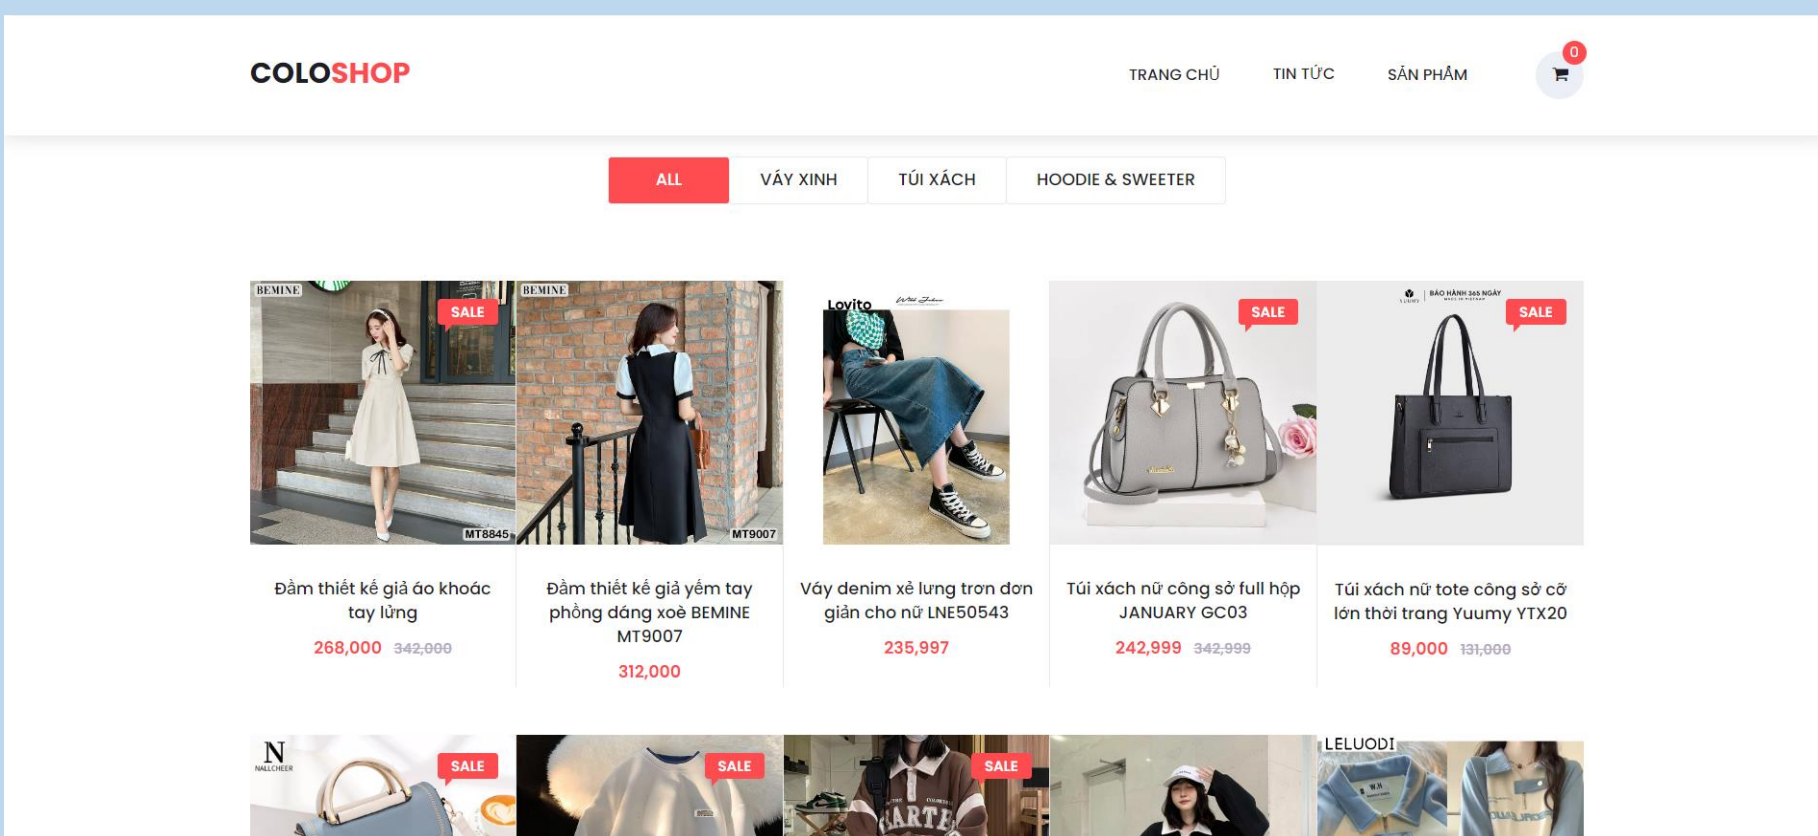

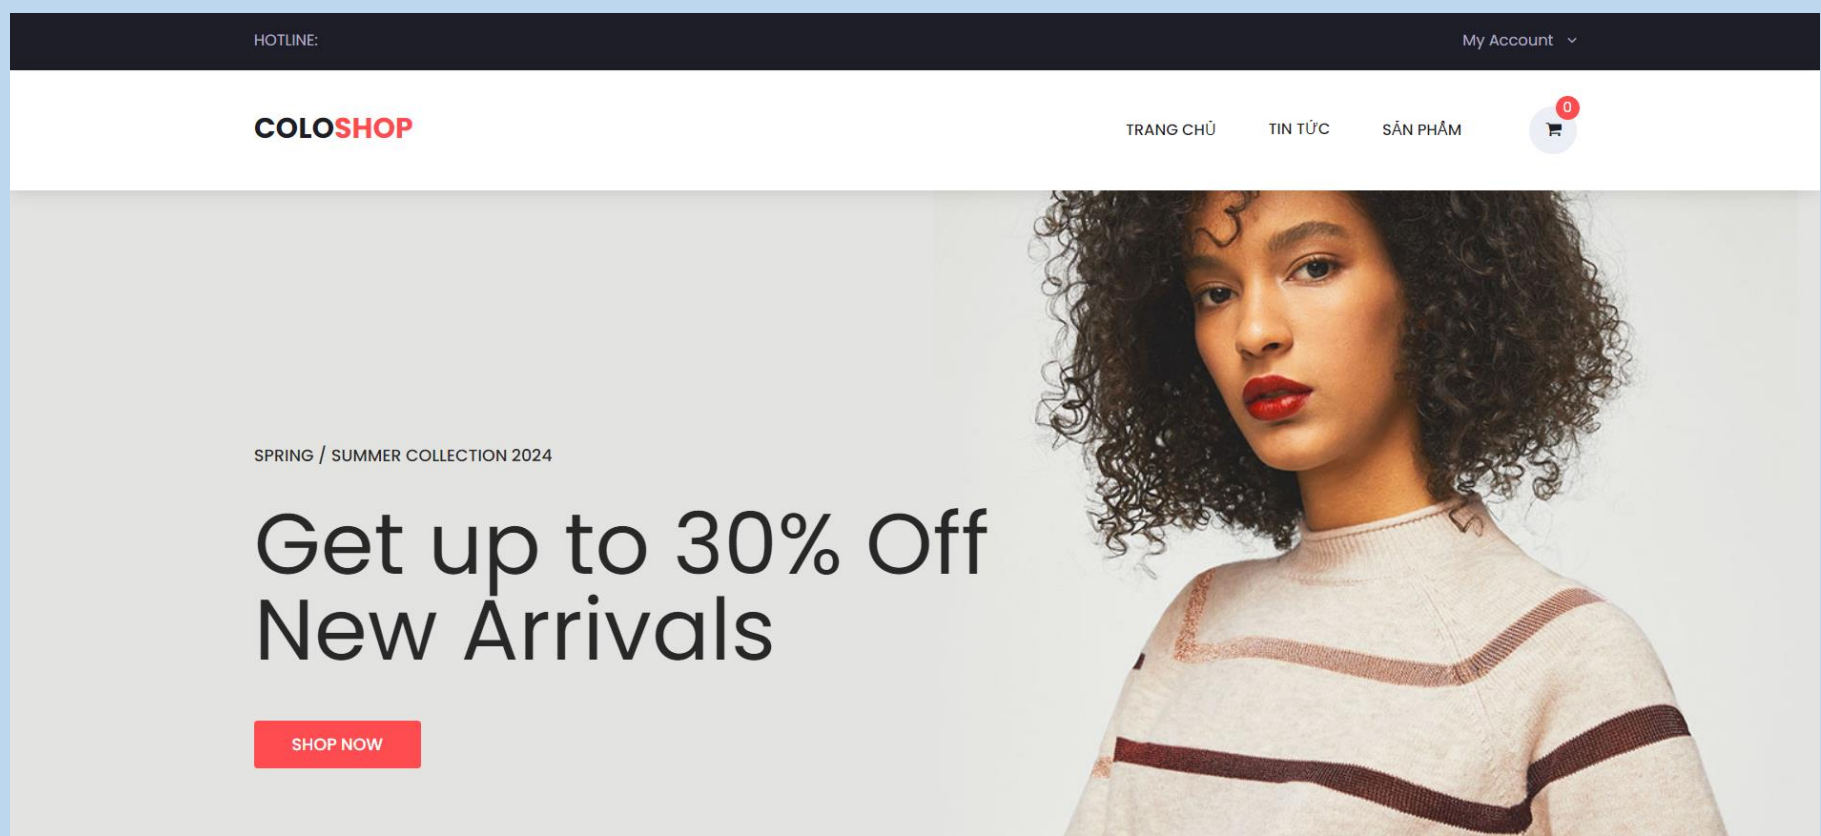

Administrators: to efficiently manage the system, including product category management, product management, order management, order status management, account management, post management, access rights management, and statistics.

TECHNOLOGIES

Microsoft®
SQL Server®

RESULTS

CONCLUSION

Achievements:

- Completed system and database design.
- Completed interface design for Administrators and Customers.
- Completed programming of functions according to the design.

Future Development Plans:

- Add functions for Shipper to facilitate easier order management.
- Add more features for customers, such as product reviews and favorites, to enhance the customer experience.
- Add Colors and Sizes attributes for products.
- Improve the security of the website.
